

Setting up Your Page in Sway

1

Click on **Design** in the top left corner.

Then click on **Styles** in the top right corner:

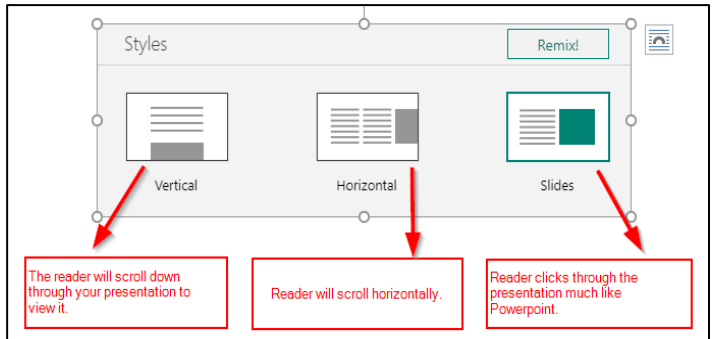

2

Choose your layout. Your Sway can either run:

- horizontally (Scroll left and right)
- vertically (scroll up and down)
- on pages that you flip through.

To change these, click on **Layout** at the top. You can change this any time as you work by clicking on **Layout** again.

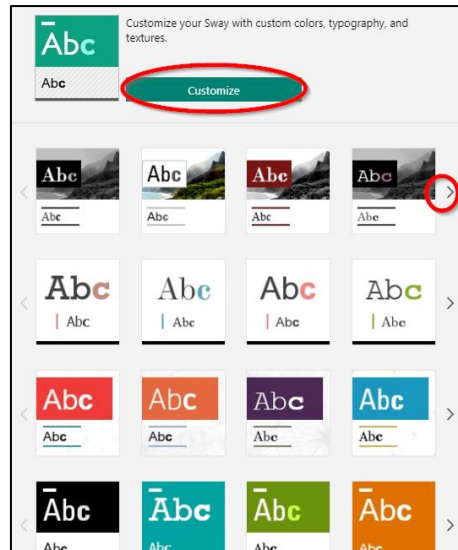

3

Now you can choose the design for your page.

Scroll down to see the different design templates and click on them to see what they look like. Clicking on the arrows at the right give you more options. This too can be changed at any time that you are working by returning to **Design**.

Click on **Customize** if you would like to design your own.

4

You can also try to **Remix** button at the top to experiment with different designs. Each time you click **Remix** it will show you a different design.

5

Click **Storyline** to return to your storyline and work on your Sway.
