<p>Knowledge Gained Project should demonstrate knowledge and understanding of what people need to survive and structures need to be in place for humans to continue to survive in their chosen environment (sustainability).</p>	Project doesn't show that any research was done to understand the needs of human beings and sustainability.	Project somewhat addresses survival needs and demonstrates that research may have been done but it is not clearly presented. What the team learned was somewhat shown in the build.	Project demonstrates the topics of human survival needs and sustainability clearly. What the builder(s) learned is clearly described.	Project shows evidence of research into problems that our world is facing and an accurate, clear solution for future survival. Builder (s) knowledge of theme is clearly shown.	
<p>Design Minecraft design features are used to show solution(s) that will enable humans to continuously survive in the chosen future environment.</p>	The submission doesn't address the theme. The Minecraft build doesn't show humans can survive in the chosen future environment.	Builder (s) used some design elements of Minecraft to show how humans can continuously survive in their chosen environment. Some elements detract from the theme.	Submission shows how humans can continuously survive in their chosen environment and features of Minecraft were used to enhance the build.	Submission shows an innovative design for a sustainable future city. Features of Minecraft are used to create realistic (can be futuristic) solutions to survival issues.	
<p>Originality and Creativity Minecraft build should show creativity and original thought in the solution to creation of a sustainable future city.</p>	The submission lacks original thought and creativity.	The submission is somewhat creative.	The submission is original and creative. Some innovative or creative solutions are explored.	The submission is original, creative, unique and meaningful and provides original solutions to continued human survival in their environment.	
<p>Oral Presentation Students should submit a video in Flip that clearly outlines the features of their future city and how they have addressed the issues of continued human survival in their city.</p>	Submission video minimally explains the build and it wasn't clear how their city is unique and designed to support human life.	Submission video somewhat explains how their city is designed to support human life. Speaking was somewhat clear. Not all the elements are clearly explained.	In the submission video they explain how their city is unique and designed to support continuous human life. They speak clearly and show enthusiasm for their project.	Student (s) describe the details of their project explaining how their city is unique and designed to support continuous human life. Speaking was clear and easy to understand. Special features of the build are showcased enthusiastically.
