

BELT & SPINDLE SANDER

The purpose of a belt or spindle sander is to SMOOTH A STRAIGHT OR CURVED CUT

- 1) Always use appropriate eye protection.
- 2) Don't use the abrasive belt/spindle if it is torn or damaged. Report it to the instructor if it is damaged.
- 3) The material **MUST** be held flat against the table and hands kept clear of the abrasive belt/spindle.
- 4) **ALL** adjustments to the machine are made **BEFORE** starting it.

- 5) Always check to make sure the table is adjusted for the angle that you want. Use a square to do this.

- 6) Sand against the direction the spindle/belt is spinning.
- 7) Do not leave the machine until it has come to a full stop.

- 8) Do not use metal on the belt sander or spindle sander. Sparks can get into the dust extraction and start a fire.

- 9) One operator only at a time.
