

Writing Trait: **Organization**

Learning Intention: draw objects that represent a variety of colours, and use letter sounds to write about colours

Carol.Walters@sd71.bc.ca

by Karma Wilson & Jane Chapman

Before Reading:

Use the front cover image to have students notice. What do they see in the picture? Can they infer from the characters' expressions how they feel?

Share the back cover too. Encourage more dialogue because, "Reading and writing float on a sea of talk." ~ James Britton.

Ask children in teams of 3 or 4 to name as many different colours as they can. With an educational assistant, two groups can be made and responses recorded on charts. Encourage additions to the chart as students learn more names for colours.

During Reading:

After reading just a couple of pages, invite children to notice the words this author has chosen. What are they noticing about words such as walking, talking; do and blue?

While reading, leave off the upcoming rhyming word. Can children predict these words through context and rhyming clues? e.g. "Hare points up *ahead* ..." can you think of a colour that rhymes with ahead?

After Reading:

Visuals from Pinterest appear on the next few pages and offer a variety of activities to do in the classroom that will help children learn about colours. A black line master offers students a place to draw pictures of things they know are blue, orange, red, etc and label their drawings.

Easy Art for Kids – Painting on Foil

Painting on tin foil. "If you don't have easel to attach your foil to, try taping it to a table or large piece of cardboard for some support. It also helps to add a small amount of dish washing liquid to your paint mix. Not only will that make cleaning up easier but it also helps the paint to stick to the foil better and not flake off when it dries."

Raised Salt Painting

Kid craft: Salt painting. Sooo cool. Make a design on paper with Elmer's glue, sprinkle salt on (be generous), shake the extra salt off. Dip brush into water colors (or food coloring + water) and touch with a drop of color to an area of glue and watch it spread!
