

Creating QR Code in Edge

QR codes are being used more and more as people figure out how to use them effectively. They allow users to quickly access information from a web browser just by scanning the QR code with a mobile device. Edge allows users to access and save QR codes to the website address right from the address bar.

| | | |
|---|---|--|
| 1 | <p>Open the Edge browser.</p> <p>Type in the website address you would like to create a QR code from in the address bar. Press Enter to go to the site. (You won't see the QR code icon yet).</p> |  |
| 3 | <p>Click on the address bar right next to the website address. You now see a few icons being displayed on the far right.</p> |  |
| 4 | <p>Click on the QR code icon. This will open up another window which will allow you to Copy or Download the QR code.</p> |  |
| 5 | <p>Insert the QR code into a document, website, cards, etc.</p> <p>The user just has to open the Camera App on the mobile device and frame the QR code in the yellow brackets displayed on the screen. The link will be displayed at the bottom of the screen. Tap on this to open the website.</p> |  |
