

# Using Tags in your Blog Posts

Tags are keywords that help organize blog posts and make it easier for readers to find related content.

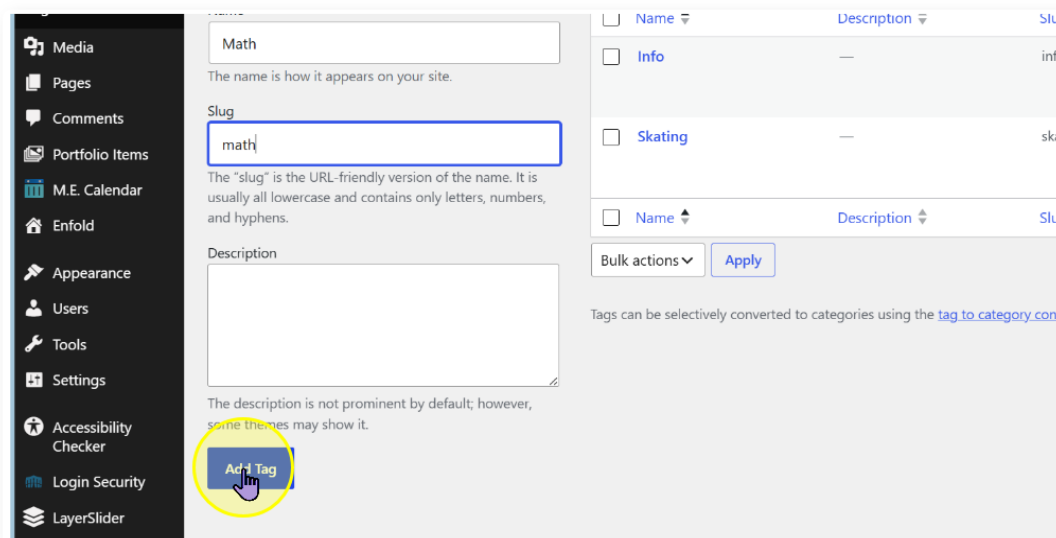

- 1 There are a few different ways to create tags. You can create them when you make your blog post or you can click on **Posts** and then **Tags**.

- 2 Give your Tag a name and a slug (type it in lowercase with hyphens instead of spaces).

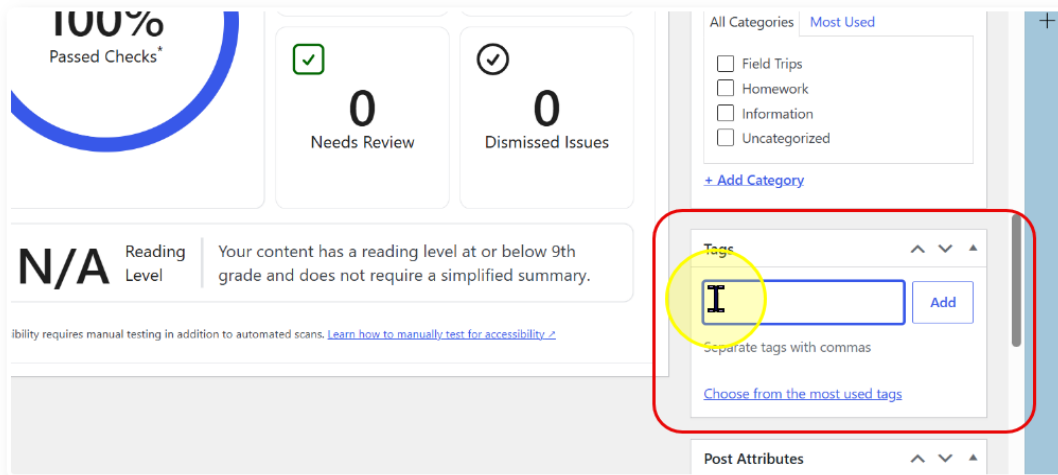

- 3 When you are ready click on **Add Tag** at the bottom.

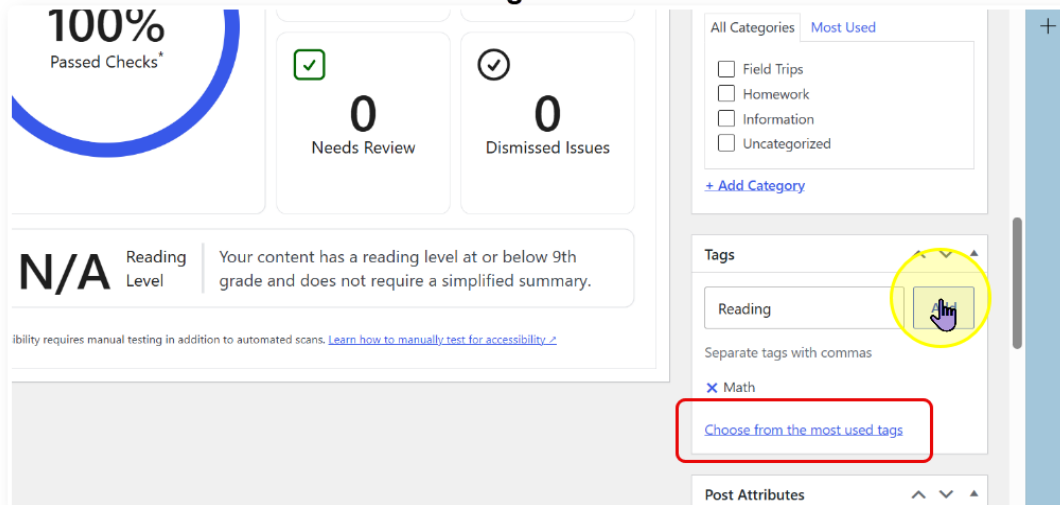

4

You can add **Tags** while making your post as well. Scroll down and find the **Tags** section on the right. Then type your new tag name in the box that you see and click on **Add**.

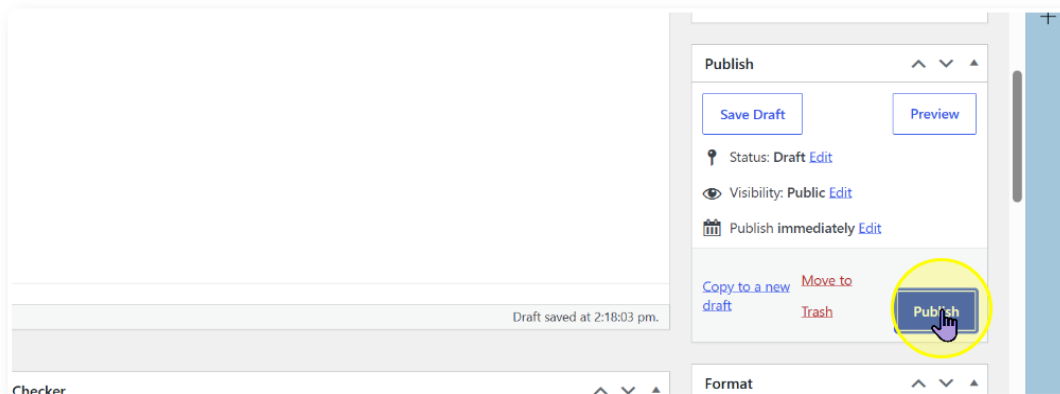

5

Type in all the Tags you would like to add to the post. Notice you can also click on **Choose from the most used tags** for a list.

6

**Publish** or **Update** when you are finished your post.

7

When readers are looking at your blog post that have tags, they will see the other posts you have done with the same tags underneath the post.
