SD71 Predictive (Word Prediction) iOS 26/27 (iPad)

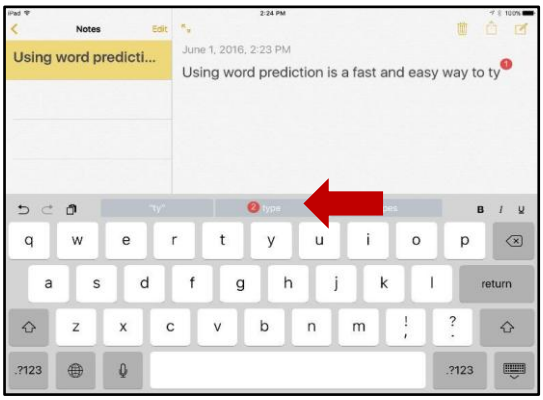

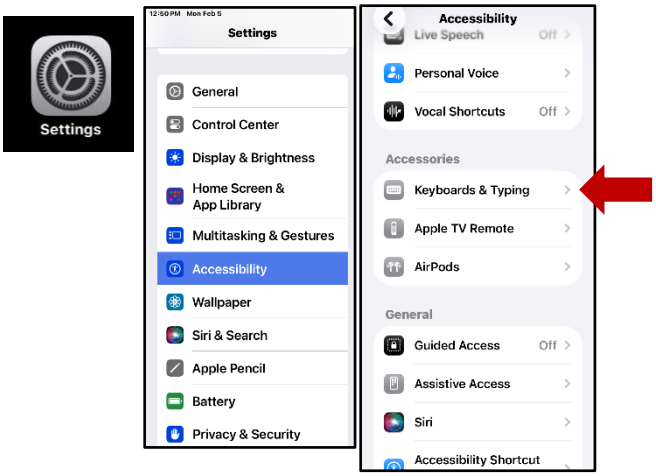

Introduction: Predictive (Word Prediction) is a tool that is built into the Apple iOS, using the Apple keyboard. Predictive provides word suggestions based on the letters that have been entered. There are multiple third party keyboards that also provide word prediction but this tutorial will be restricted to the built in Apple keyboard.

Learning Objectives:

Completion of this tutorial will give you experience with the following:

- Set up word prediction on an iDevice.
- Use word prediction when typing.
- Turn on hold to speak predictions to hear words read out loud.

Predictive (Word Prediction)		
1	This tool will work in any app that utilizes the built-in Apple keyboard. To enable the predictive, open the **Settings** app by tapping the Settings icon.	
2	Select **General** (1) and select **Keyboard** in the right-hand side (2).	
3	In the keyboard settings window, ensure that the **Predictive** option is enabled. The radio button should be green (1).	

4	Open an app that supports typing using the Apple keyboard (e.g. Notes). Type a sentence. Note that as letters are entered (1), a selection of words will appear above the keyboard. To enter a word that is predicted, simply tap on the word (2) which will then appear in the main body of text.	
Predicted words read out loud		
1	To have the predicted words read out loud you can turn on **Hold to Speak Predictions** in the **Accessibility Settings**. Open the **Settings** app by tapping the Settings icon. Select **Accessibility** on the left-hand side. Select **"Keyboards & Typing"** on the right.	
2	Under Keyboards & Typing, Select **Typing Feedback**. Turn on **Hold to Speak Predictions** (green). When back in the app on the apple keyboard to hear the predicted words read out loud, tap and hold finger on the word to hear it spoken.
